Line up

SJ700D series

(Models: 3-ph,200V class 0.4 to 55kW,3-ph,400V class 0.75 to 132kW)

1 Dual rating

- SJ700D can be used for both heavy and normal duty.
- One-frame-size smaller SJ700D may be applicable for variable torque applications.

SJ700
SJ700D-150LFF3
(15kW)

Heavy duty: Conveyor, Lift Hoist, etc

➔ **15kW**
(overload capacity:150%,60sec)

Normal duty: Fan, Pump, etc.

➔ **18.5kW**
(Overload capacity:120%,60sec)

2 EzSQ improvement (1task/2ms⇒5 tasks/2ms)

- By separating codes to be repeated as loops in different tasks, overall execution can be faster.

3 RS485 (Modbus-RTU) communication speed is improved (Max19.2kbps⇒115.2kbps speed is improved)

- Approx. 6 times faster communication in comparison with the prior model is now supported. Additionally, more communication commands are available.

4 LCD operator (Optional:WOP) upgrade

- 5-line LCD operator
- Real time clock built in
- 4 sets of user parameter configurations can be saved and transferred.
- Two color backlight that distinguish trip status
- User selectable content for display.

5 Versatile functions

- Phase loss input protection : covers not only the input but output as well.
- Automatic return to the initial display (b164): Without operating for 10 minutes, the display returns to the initial display automatically.

The Hitachi SJ700D-3 series succeed the SJ700-2 series with the additional and enhanced features

6 Induction motor & permanent magnetic motor control with one inverter (PM motor control : ordering production)

- The SJ700D series inverter can drive both induction motors (IM) and permanent magnetic motors (PM).

Details of enhancement (Comparison between SJ700-2 and SJ700D-3)

No.	item		Enhanced function, added parameters, etc.		Remarks
1	Model	SJ700D-004 to 550LFF3/LFEF3/LFUF3 SJ700D-007 to 1320HFF3/HFEF3/1500HFUF3			
2	Added function	Constant torque/ Variable torque (CT/VT) selection	Constant torque / Variable torque mode selectable (b049)	Newly added parameter b049 to switch between Constant torque mode and Variable torque mode.	In case of driving light load application, you can choose one power size smaller inverter or one frame size smaller inverter.
3		PM motor control [ordering production]	Control mode (A044)	PM motor control (06) is added to the selection in A044	PM motor control is only available in Variable torque mode. (note) The model supporting PM motor control is ordering production.
4			PM motor control parameters (H101~H134)	Parameters related to PM motor control are newly added (same as WJ200 series)	
5		Automatic return to the initial display	Automatic return to the initial display (b164)	Without operating for 10 minutes, the display returns to the initial display automatically.	
6		Data read and write	Data Read/Write selection (b166)	Selection of enabling or disabling data Read / Write from the copy unit WOP for parameter setting protection and security	
7		Inverter mode	Inverter mode monitor (d060)	Displays currently selected inverter mode, IM motor (induction motor) or PM motor mode.(IM mode or PM mode.)	
8		Phase loss protection	Phase loss output protection (b141,b142)	The inverter detects motor output phase loss	
9		Improvement function	EzSQ	Improvement	Parallel processing of 5 tasks
10				EzSQ starting trigger terminal: changed from FW terminal to PRG terminal which can be assigned any of input terminals.	
11	Additional function			Always running mode is added to selection of starting method for EzSQ.	
12				Command to store changed data into EEPROM (eepwrt command)	
13				Command to obtain clock data from WOP (rtcset command)	
14				Part of EzSQ program variables (P129 (U29) to P131 (U31)) are automatically stored at power down (only when A017 is other than 00)	
15	WOP operator [Option]		Full compatibility with the copy unit WOP(5 line display)		
16			Real time clock function is available.		
17	RS485		Communication speed is improved.	2400/4800/9600/19.2k/38.4k/57.6k/76.8k/115.2k bps	
18			Modbus RTU	Maximum data length is expanded. 03h (Read holding register) 10h (Write in holding resisters)	4 registers (8 byte) to 16 registers (32 byte)
19				Command to write into/read from multiple holding registers is added (17h: Write/Read multiple holding registers)	Read and Write 16 registers (32 byte)
20				Broadcast communication function is added.	
21				EEPROM storing mode is added.	
22	Initializing		Initializing method	Parameter setting (b180=01) triggers initialization	Initialization method of SJ700-2 is also valid.
23			Initializing of EzSQ	Parameter b084 range is expanded.	
24			Initial value	b037=00 (Full access)	
25	Selection of initial display	Selection of initial display is expanded (all monitoring parameters, frequency command F001 (WOP monitor B))			
26	Others	Warnings	Warnings are organized.		47 warnings to 31 warnings
27		Run command in case of warnings	At occurrence of warning, the inverter does not accept Run command.		

Series
Line up**SJ700**

For More Precise Control

**SJ700B**

For General Purpose Use

High starting torque, Powerful drive and easy setting

High starting torque

Improved sensorless vector control and auto tuning produce high starting torque of 200% or more at 0.3Hz.*1
Easy setup of motor constants
Ideal for applications which need high torque, such as cranes, extruders and lifts.

*1 Starting torque

Series	Applicable motor	Starting torque
SJ700D(CT)	0.4 to 55kW	0.3Hz/200%
	75 to 132kW	0.3Hz/180%
SJ700	185 to 400kW	0.3Hz/150%
SJ700B	11 to 75kW	0.5Hz/150%
	90 to 160kW	0.5Hz/120%

Possible with SJ700 series

Hitachi exclusive 0Hz domain sensorless vector control *)

Develops 150% (SJ700B:120%)*2 torque at 0Hz speed reference

Ideal for cranes and other applications that require high torque upon starting.

*2 when inverter is one frame size larger than motor.

Position control function*)

The SJ700D/SJ700/SJ700B, with optional feedback board installed, together with an encoder-equipped motor can perform position control.

For many applications, suitable performance can be achieved at a lower cost than servo systems.

Based on your four motion parameters (position command, speed command, acceleration time and deceleration time), the SJ700D/SJ700/SJ700B will move an object from original position A to target position B.

After the movement, the inverter keeps hold motor position.

Trip avoidance function

Over current & voltage suppress function

Higher internal calculation speed improves current control performance.

Over-current suppress and Over-voltage suppress functions avoid inverter trips during acceleration and deceleration.

DC bus AVR function during deceleration

The SJ700D/SJ700/SJ700B controls deceleration time so that the DC bus voltage does not exceed the over-voltage trip level, providing trip-less operation during deceleration.

High performance, powerful functions, yet user friendly.

Programming [EzSQ: easy sequence] function

Inverter control by built-in programming functions

Custom operation is realized by downloading to an inverter a user program created with ProDriveNext, Hitachi inverter configuration software.

Tailor inverter operation to meet changing process requirements, and replace separate PLCs in some cases.

By simplifying or eliminating external hardware, significant cost savings can be achieved.

Password function is incorporated to provide security for proprietary program data against loss or unauthorized modification.

Typical example - Replacing external relay circuit

Item	Description	
Language Spec	Language type	BASIC Like
	Supported Device	Windows (DOS/V)OS:WindowsVista, Windows7)
	Memory area	1,024 steps or 6k byte (Smaller of these)Program is stored in internal of inverter.
	Programming environment	Editor (Windows), Display (Windows) Syntax check (Windows) Program download/upload, All clear
	Executable format	Interpreter 2.0ms/command (Sub routine supported. 8 nested)
I/O function	External input	Contact signal/Open collector signal input (Internal DC24V power supply available)
		Program RUN command SJ700D:PRG terminal SJ700/SJ700B:FW terminal
		General-purpose input Maximum of 8 point (X(00)-X(07))
	External analog input	XA (0) : 0-10V (O terminal) XA (1) : 4-20mA (OI terminal) XA (2) : 0-10V (O2 terminal)
External output	General-purpose output terminal	Maximum of 6 point (Y(00)-Y(05))
	External analog output	YA (0) : Setup for FM terminal is possible. YA (1) : Setup for AM terminal is possible.
		YA (2) : Setup for AMI terminal is possible.
Command	Reserved word	Programmable flow control <Loop, Unconditional jump, conditional jump, Time control, Sub routine, Others> Operation command <+, -, *, /, substitution, mod, abs> I/O control (Bit input, Word input, Bit output, Word output) Timer control <on delay, off delay> Inverter parameter setting
		User U (00)-U (31)/32 point
		Timer UL (00)-UL (07)/8 point
		Set frequency SET-Freq
		Acceleration time ACCEL Deceleration time DECEL
	Variable	Monitor Output frequency, Output current, Rotation direction, PID feedback, Converted frequency, Output torque, Output voltage, Power, Cumulative RUN time, Cumulative power-on time, trip
		General-purpose input contact X (00)-X (07)/8 point
		General-purpose output contact Y (00)-Y (05)/6 point (1 point is relay output)
		Internal user UB (00)-UB (07)/8 point
		Internal timer contact TD (0)-TD (7)/8 point Inverter input and output In a remote operator display code.

★ Windows® is a registered trademark of Microsoft Corporation.U.S.A and other countries.

EMC Filter & brake circuit integrated as standard

Built-in EMC filter up to 150kW*

Cost and space reduction compared with external EMC filter.
Reduces electromagnetic noise.Meets EN61800-3 2nd-Environment

★ SJ700: European Version and Japanese Version does not have 150kW
★ SJ700B: All models (5.5kW is without EMC Filter)

Built-in brake resistor circuit up to 22kW*

Cost and space reduction compared with external braking controller.

★ SJ700B: Up to 30kW

Ease of maintenance

Easy-removable construction for maintenance

Field replacement of cooling fan (s) and DC bus capacitors can be accomplished in a fraction of the time.

Using Logic terminal move to SJ700D/SJ700 without wiring change.

Read SJ300 Parameter by WOP remote operator and write them in to SJ700D/SJ700

Easy-removable
Cooling Fan

Easy-removable
DC bus Capacitors
(SJ700D/SJ700: above 15kW
SJ700B: above 18.5kW)

*1 Control circuit terminals comparison table

Series	Input terminals	Output terminals
SJ700D/SJ700	9 terminals (Intelligent 8terminals,FW)	5 terminals (Open collector outputs)
SJ700B		
SJ300		
L300P	6 terminals (Intelligent 5terminals,FW)	2 terminals (Relay outputs)

Long lifetime components & Lifetime warning function

Long lifetime components

Design lifetime 10 Years or more for DC bus capacitors & Cooling Fan. Cooling Fan ON/OFF control function for longer fan life.

*Condition for lifetime calculation -

Ambient temperature: 40 deg C (SJ700B: 30 deg C)

Ambient condition: No corrosive gas, oil mist nor dust

10 years is a design lifetime base on calculation, and not guaranteed

Lifetime warning function

Lifetime warning function helps to perform preventive maintenance before a failure occurrence.

DC bus capacitor, cooling fan, heat sink temperature and motor temperature can be monitored in order to replace components prior to failure.

Easy operation

User selection of displayed parameters

Data comparison display mode

Displays only parameters changed from factory default

User-define parameter display mode

Displays only user defined parameters
(up to 12 parameters, U001 to U012)

Basic parameter display mode

Displays only pre-defined basic parameters which are used commonly

Other functions

Direct digit edit mode for quicker selection of parameter. Returning to output frequency monitor display (d001) by holding the FUNC key for 3 seconds regardless of the current content.

Network compatibility

The Modbus-RTU communication is embedded as standard along with a dedicated terminal.

Other fieldbus communications such DeviceNet and PROFIBUS-DP are supported with optional fieldbus modules.

-DeviceNet is a trade mark of Open DeviceNet Vender Association, Inc.

-PROFIBUS-DP is a registered trade mark of PROFIBUS Nutzer Organization

Simple & Low cost wiring, ease of installation and replacement using feildbus commuincation

Global standards

Conformity to global standards

CE, UL, c-UL, RCM approvals.

Logic input & output terminal apply sink & source logic

Wide Input power voltage range

Input voltage 240V for 200V class and 480V for 400V class as standard.

Environmental friendliness

Micro surge voltage suppress function

Hitachi original PWM control method limits motor terminal voltage to less than two times of inverter DC bus voltage. Lower than Hitachi motor Max. insulation voltage (1,250V) (During regeneration, the motor terminal voltage may exceed the motor maximum insulation voltage (1,250V))

EU RoHS compliant

EU RoHS compliant (except solder in power module)

Improvement of environmental tolerance

Varnish coating of internal PC board & plating of main circuit copper bus bar are standard.

Versatile functions

Instantaneous power failure disregard function

The SJ700D/SJ700/SJ700B overrides instantaneous power failure when power fluctuation happens frequently, as long as DC bus voltage remains higher than under-voltage trip level.

Emergency stop

Shuts down the inverter by hardware, bypassing the CPU, to achieve a reliable, emergency stop function.

Intelligent input terminal and output terminal ON/OFF delay function

Helps simplify external circuits.

Active frequency matching function

Motor frequency match restart function operates effectively even without motor residual voltage.

Controlled deceleration and stop on power loss

Analog input disconnection detection function

The SJ700D/SJ700/SJ700B outputs a disconnection signal when frequency command through analog input is lost.

Acceleration/Deceleration curve functions

The curve shape (five types, such as S-curve, etc.) can be chosen according to the application requirements.

Analog command holding function (AHD)

Output frequency can be changed with UP/DOWN Function, or with an analog signal as reference value. The set frequency at power shutdown can be saved, too.

Pulse train input function

Pulse train input for Frequency reference or PID feed back signal, with SJ-FB (speed feed back card option).

Integrated input electric power monitor

Input electric power (kW) and Integrated input electric power for monitoring energy saving.

Automatic carrier frequency adjustment function

The SJ700D/SJ700/SJ700B detects motor current and automatically reduces carrier frequency according to the current.

The resolution of analog outputs (voltage, current) is improved to 10 bits.

ISO 14001
JQA-EM6974

ISO 9001
JQA-1153

Hitachi variable frequency drives (inverters) in this brochure are produced at the factory registered under the ISO 14001 standard for environmental management system and the ISO 9001 standard for inverter quality management system.

*1: The protection method conforms to JIS C 0920 (IEC60529)
*2: The applicable motor refers to Hitachi standard 3-phase motor (4-pole).To use other motors, be sure to prevent the rated motor current (50Hz) from exceeding the rated output current of the inverter.
*3: The output voltage decreases as the main power supply voltage decreases except for the use of AVR function.
*4: Braking resistor is not integrated in the inverter. Please install optional braking resistor or dynamic braking unit when large braking torque is required.
*5: Conforms to the test method specified in JIS C 60068-2-6 : 2010 (IEC 60068-2-6 : 2007).
*6: To operate the motor beyond 50/60Hz, please consult with the motor manufacturer about the maximum allowable rotation speed.
*7: Storage temperature refers to the temperature in transportation.
*8: The frequency command is the maximum frequency at 9.8V for input voltage 0 to 10VDC, or at 19.8mA for input current 4 to 20mA.
If this characteristic is not satisfactory for your application,contact your Hitachi representative.

SPECIFICATIONS

● General Specifications

Items			General Specifications	
Control	Control method		Line to line sine wave pulse-width modulation (PWM) control	
	Output frequency range (*6)		0.1-400.0Hz(400kW:0.1-120Hz)	
	Frequency accuracy		Digital: ±0.01% of the maximum frequency, Analog: ±0.2%(25±10°C)	
	Frequency resolution		Digital setting: 0.01Hz, Analog setting: (Maximum frequency)/4,000 (O terminal: 12bit 0-10V, O2 terminal: 12bit -10+10V)	
	V/f characteristics		SJ700D:IM : V/f optionally variable (30-400Hz of base frequency), V/f control (constant torque, reduced torque), sensorless vector control,0Hz ranged sensorless vector control (only CT), vector with sensor (SJ-FB card option , only CT) [ordering production] PM : sensorless vector control (only VT) SJ700/SJ700B:IM : V/f optionally variable (30-400Hz of base frequency), V/f control (constant torque, reduced torque), sensorless vector control 0Hz ranged sensorless vector control, vector with sensor (SJ-FB card option)	
	Speed fluctuation		±0.5% (sensorless vector control)	
	Acceleration/deceleration time		0.01-3,600sec. (Linear/curve, accel./decel. selection), Two-stage accel./decel.	
	Starting Torque	SLV	SJ700/SJ700D (CT) 200%/0.3Hz, (VT) 150%/0.5Hz, 75kW to 150kW (CT) 180%/0.3Hz, (VT) 120%/0.5Hz, 185kW and over 150%/0.3Hz. SJ700B : 150%/0.5Hz, 90kW and over : 120%/0.5Hz,	
		0Hz-SLV	SJ700/SJ700D (CT) (0Hz domain with motor one frame size down) 150% at around 0Hz, 75kW and over: 130% at around 0Hz. SJ700B : 120% at around 0Hz,SJ700D (VT):Disable.	
		PM-SLV[ordering production]	SJ700D (0.4 to 132kW) : 50% (at 10% of motor constant speed) [ordering production] (only SJ700D (VT))	
Carrier frequency range		SJ700/SJ700D (CT) 0.5 to 15kHz, (VT) 0.5 to 12 kHz, 75kW to 150kW (CT) 0.5 to 10kHz, (VT) 0.5 to 8 kHz,185kW and over : 0.5 to 3.0kHz SJ700B : 0.5 to 12.0kHz (90kW and over : 0.5 to 8.0kHz)		
DC braking		Performs at start: under set frequency at deceleration, via an external input (braking force, time, and operating frequency).		
Input signal	Frequency setting	Operator	Up and Down keys	
		External signal(*8)	DC 0-10V, -10+10V (input impedance 10kΩ), 4-20mA (input impedance 100Ω)	
		External port	Setting via RS485 communication	
	Forward /reverse Start /stop	Operator	Start/stop commands (forward/reverse switching by parameter setting)	
		External signal	Forward-operation start/stop commands (reverse-operation start/stop possible when relevant commands are assigned to intelligent input terminals)3-wire input possible (when relevant commands are assigned to control circuit terminals)	
		External port	Setting via RS485 communication	
	Intelligent input terminals	Terminals	8 terminals, NO/NC switchable, sink logic/source logic switchable	
		Functions	Reverse operation (RV), Multi-speed 1 setting (CF1), Multi-speed 2 setting (CF2), Multi-speed 3 setting (CF3), Multi-speed 4 setting (CF4), Jogging (JG), external DC braking (DB), 2nd motor control (SET), 2-stage acceleration/deceleration (2CH), free-run stop (FRS), external trip (EXT), unattended start protection (USP), commercial power supply switching (CS), software lock (SFT), analog input switching (AT), 3rd motor control (SET3), reset (RS), starting by 3-wire input (STA), stopping by 3-wire input (STP), forward/reverse switching by 3-wire input (F/R), PID disable (PID), PID integration reset (PIDC), control gain switching (CAS), acceleration by remote control (UP), deceleration by remote control (DWN), data clearance by remote control (UDC), forcible operation (OPE), Multi-speed bit 1 (SF1), Multi-speed bit 2 (SF2), Multi-speed bit 3 (SF3), Multi-speed bit 4 (SF4), Multi-speed bit 5 (SF5), Multi-speed bit 6 (SF6), Multi-speed bit 7 (SF7), overload restriction selection (OLR), torque limit selection (enabling/disabling) (TL), torque limit 1 (TRQ1), torque limit 2 (TRQ2), P/PI switching (PPI), braking confirmation (BOK), orientation (ORT), LAD cancellation (LAC), clearance of position deviation (PCLR), permission of 90° shift phase (STAT), trigger for frequency addition (A145) (ADD), forcible-terminal operation (F-TM), permission of torque command input (ATR), cumulative power clearance (KHC), servo-on (SON), pre-excitation (FOC), general-purpose input 1 (MI1), general-purpose input 2 (MI2), general-purpose input 3 (MI3), general-purpose input 4 (MI4), general-purpose input 5 (MI5), general-purpose input 6 (MI6), general-purpose input 7 (MI7), general-purpose input 8 (MI8), analog command holding (AHD), Multistage position settings selection 1 (CP1), Multistage position settings selection 2 (CP2), Multistage position settings selection 3 (CP3), Zero-return limit function (ORL), Zero-return trigger function (ORG), Forward drive stop (FOT), reverse drive stop (ROT), Speed / position switching (SPD), Pulse counter (PCNT), Pulse counter clear (PCC), Emergency stop (EMR) ,EzSQ PRG-Run(PRG)(*12) ,no assignment (no)	
		Thermistor input		1 terminal (PTC characteristics)
	Output signal	Intelligent output terminals	Terminals	5 open-collector output terminals, NO/NC switchable, sink logic/source logic switchable 1 relay (1c-contact) output terminal: NO/NC switchable
			Functions	Running (RUN), constant-speed reached (FA1), set frequency overreached (FA2), overload notice advance signal (1) (OL), output deviation for PID control (OD), alarm signal (AL), set frequency reached (FA3), over-torque (OTQ), instantaneous power failure (IP), undervoltage (UV), torque limited (TRQ), operation time over (RNT), plug-in time over (ONT), thermal alarm signal (THM), brake release (BRK), braking error (BER), 0Hz detection signal (ZS), speed deviation maximum (DSE), positioning completed (POK), set frequency overreached 2 (FA4), set frequency reached 2 (FA5), overload notice advance signal (2) (OL2), PID feedback comparison (FBV), communication line disconnection (Ndc), logical operation result 1 (LOG1), logical operation result 2 (LOG2), logical operation result 3 (LOG3), logical operation result 4 (LOG4), logical operation result 5 (LOG5), logical operation result 6 (LOG6), capacitor life warning (WAC)(*11), cooling-fan speed drop (WAF), starting contact signal (FR), heat sink overheat warning (OHF), low-current indication signal (LOC), general-purpose output 1 (M01), general-purpose output 2 (M02), general-purpose output 3 (M03), general-purpose output 4 (M04), general-purpose output 5 (M05), general-purpose output 6 (M06), inverter ready (IRDY), forward rotation (FWR), reverse rotation (RVR), major failure (MJA), window comparator O (WCO), window comparator OI (WCOI), window comparator O2 (WCO2), alarm code 0 to 3 (AC0 to AC3)
Monitor output terminals			Analog voltage output, analog current output, pulse-string output (e.g., A-F, D-F [n-fold, pulse output only], A, T, V, P)	
Monitoring on display		Output frequency, output current, output torque, frequency conversion data, trip history, input/output terminal status, electric power, and others		
Other functions		Free V/f setting (7 breakpoints), frequency upper/lower limit, jump (center) frequency, acceleration/deceleration according to characteristic curve, manual torque boost level/breakpoint, energy-saving operation, analog meter adjustment, start frequency setting, carrier frequency adjustment, electronic thermal function (available also for free setting), external start/end frequency/frequency rate, analog input selection, retry after trip, restart after instantaneous power failure, output of various signals, starting with reduced voltage, overload restriction, initial-value setting, automatic deceleration at power failure, AVR function, fuzzy acceleration/deceleration, online/offline auto-tuning, high-torque multi-motor operation (*11) (sensorless vector control of two motors by one inverter)		
Protective functions		Overcurrent protection, overvoltage protection, undervoltage protection, electronic thermal protection, temperature error protection, instantaneous power failure protection, phase loss input protection, braking-resistor overload protection, ground-fault current detection at power-on, USP error, external trip, emergency stop trip, CT error, communication error, option board error, and others		
Environmental conditions	Ambient operating/storage temperature (*7)/ humidity		-10-50°C (*9) / -20-65°C / 20-90%RH (No condensation)	
	Location		Altitude 1,000m or less, indoors (no corrosive gases or dust)	
Options	Digital input expansion card		SJ-DG (4digits BCD, 16bits binary)	
	Feedback expansion card		SJ-FB (vector control loop speed sensor)	
	Network interface card		SJ-DN2 (DeviceNet (TM)) (*13), SJ-PB (T)2 (PROFIBUS) (*13)	
	Others		EMI filters, input/output reactors, radio noise filters, braking resistors, braking units, LCR filter, communication cables	

*1 : The protection method conforms to JIS C 0920 (IEC60529)

*2 : The applicable motor refers to Hitachi standard 3-phase motor (4-pole). To use other motors, be sure to prevent the rated motor current (50Hz) from exceeding the rated output current of the inverter.

*3 : The output voltage decreases as the main power supply voltage decreases except for the use of AVR function.

*4 : Braking resistor is not integrated in the inverter. Please install optional braking resistor or dynamic braking unit when large braking torque is required.

*5 : Conforms to the test method specified in JIS C 60068-2-6:2010 (IEC 60068-2-6:2007).

*6 : To operate the motor beyond 50/60Hz, please consult with the motor manufacturer about the maximum allowable rotation speed.

*7 : Storage temperature refers to the temperature in transportation.

*8 : The frequency command is the maximum frequency at 9.8V for input voltage 0 to 10VDC,or at 19.8mA for input current 4 to 20mA.If this characteristic is not satisfactory for your application,contact your Hitachi representative.

*9 : SJ700B series is -10 to 45°C. SJ700D (VT):-10 to 40°C.

*10 : Please be sure to connect DC reactor attached to 1850HF,2200HF,3150HF and 4000HF. (1850HF,2200HF and 3150HF of US/JP Version:The DC reactor is not attached.)

*11 : 1850HF,2200HF,3150HF and 4000HF:The function is not provided.

*12 : SJ700D-3 only.

*13 : The option cannot access new parameters in SJ700D-3.

DIMENSIONS

•SJ700-1850,2200HFE2,HFU2*2,HF2*2

Attachment DC reactor (DCL-H-185-H-R),(DCL-H-220-H-R)

•SJ700-3150HFE2,HFU2*2,HF2*2

Attachment DC reactor (DCL-H-315-H-R)

*1 Vent-Holes A are formed on both right and left side portions. Vent-Holes B are just on right side.

•SJ700-4000HFE2,HFU2,HF2

Attachment DC reactor (DCL-H-400-H-R)

[Unit : mm(inch)]
Inches for reference only.

*2 1850H,2200H and 3150H of US/JP Version:The DC reactor is not attached.

OPERATION and PROGRAMMING

SJ700/SJ700D and SJ700B Series can be easily operated with the digital operator provided as standard. The digital operator can also be detached and can be used for remote mounted control. Operator with copy function (WOP) and digital operator with potentiometer are also available as options.

Parameter Display

Displays frequency, motor current, rotational speed of the motor, and an alarm code.

Monitor LEDs

Shows drive status.

RUN key enable LED

Lights up when the inverter is ready to respond to the RUN key.

RUN Key

Press to run the motor.

STOP/RESET Key

Press to stop the drive or reset an alarm.

Function Key

Press to set or monitor a parameter value.

Power LED

Lights when the power input to the drive is ON.

ALARM LED

Lights to indicate that the inverter has tripped.

Display Unit LEDs

Indicates the unit associated with the parameter display.

Store Key

Press to write the new value to the EEPROM.

Up/Down Keys

Press up or down to sequence through parameters and functions shown on the display, and increment/decrement values.

●Setting the output frequency

●The contents of a basic mode display.

If a desired parameter is not displayed, check the setting of function "b037" (function code display restriction). To display all parameters, specify "00" for "b037".

No.	Display code	Item
1	d001 to d104	Monitor display
2	F001	Output frequency setting
3	F002	Acceleration (1) time setting
4	F003	Deceleration (1) time setting
5	F004	Operation direction setting
6	A001	Frequency source setting
7	A002	Run command source setting
8	A003	Base frequency setting
9	A004	Maximum frequency setting
10	A005	[AT] selection
11	A020	Multi-speed frequency setting
12	A021	Multi-speed 1 setting
13	A022	Multi-speed 2 setting
14	A023	Multi-speed 3 setting
15	A044	1st control method
16	A045	V/f gain setting
17	A085	Operation mode selection
18	b001	Selection of restart mode
19	b002	Allowable under-voltage power failure time
20	b008	Retry-after-trip selection
21	b011	Retry wait time after trip
22	b037	Function code display restriction
23	b083	Carrier frequency setting
24	b084	Initialization mode selection
25	b130	Selection of overvoltage suppression function
26	b131	Setting of overvoltage suppression level
27	C021	Setting of intelligent output terminal 11
28	C022	Setting of intelligent output terminal 12
29	C036	Alarm relay active state

FUNCTION LIST

● MONITORING FUNCTIONS and MAIN PROFILE PARAMETERS

[○ = Allowed × = Not permitted]

Code	Function Name	Monitored data or setting	Default Setting					Setting during operation (allowed or not)	Change during operation (allowed or not)

(*1) "Over current protection", " Overload restriction", "Over current limiting" and "Electronic thermal protection" might operate from the set value when "Carrier frequency setting" is used with less than 2kHz by a low value. Please set to 2kHz or more and use the setting of "Carrier frequency setting" for such a situation.

PROTECTIVE FUNCTIONS

Name	Cause (s)	Display on digital operator	Display on remote operator/copy unit ERR1****
Over-current protection	The inverter output was short-circuited, or the motor shaft is locked or has a heavy load. These conditions cause excessive current for the inverter, so the inverter output is turned off.	While at constant speed	E01 OC.Drive
		During deceleration	E02 OC.Decel
		During acceleration	E03 OC.Accel
		Others	E04 Over.C
Overload protection (*1)	When a motor overload is detected by the electronic thermal function, the inverter trips and turns off its output.	E05	Over.L
Braking resistor overload protection	When the regenerative braking resistor exceeds the usage time allowance or an over-voltage caused by the stop of the BRD function is detected, the inverter trips and turns off its output.	E06	OL.BRD
Over-voltage protection	When the DC bus voltage exceeds a threshold, due to regenerative energy from the motor, the inverter trips and turns off its output.	E07	Over.V
EEPROM error (*2)	When the built-in EEPROM memory has problems due to noise or excessive temperature, the inverter trips and turns off its output.	E08	EEPROM
Under-voltage error	A decrease of internal DC bus voltage below a threshold results in a control circuit fault. This condition can also generate excessive motor heat or cause low torque. The inverter trips and turns off its output.	E09	Under.V
CT (Current transformer) error	If a strong source of electrical interference is close to the inverter or abnormal operations occur in the built-in CT, the inverter trips and turns off its output.	E10	CT
CPU error	When a malfunction in the built-in CPU has occurred, the inverter trips and turns off its output.	E11	CPU
External trip	When a signal to an intelligent input terminal configured as EXT has occurred, the inverter trips and turns off its output.	E12	EXTERNAL
USP error	An error occurs when power is cycled while the inverter is in RUN mode if the Unattended Start Protection (USP) is enabled. The inverter trips and does not go into RUN mode until the error is cleared.	E13	USP
Ground fault	The inverter is protected by the detection of ground faults between the inverter output and the motor during power-up tests. This feature protects the inverter only.	E14	GND.Flt
Input over-voltage protection	When the input voltage is higher than the specified value, it is detected 60 seconds after power-up and the inverter trips and turns off its output.	E15	OV.SRC
Instantaneous power failure	When power is cut for more than 15ms, the inverter trips and turns off its output. If power failure continues, the error will be cleared. The inverter restarts if it is in RUN mode when power is cycled.	E16	Inst.P-F
Temperature error due to low cooling-fan speed	The inverter will display the error code shown on the right if the lowering of cooling-fan speed is detected at the occurrence of the temperature error described below.	E20	OH.stFAN
Inverter thermal trip	When the inverter internal temperature is higher than the specified value, the thermal sensor in the inverter module detects the higher temperature of the power devices and trips, turning off the inverter output.	E21	OH.FIN
Gate array error	Communication error has occurred between CPU and gate array.	E23	GA.COM
Phase loss input protection	One of three lines of 3-phase power supply is missing.	E24	PH.Fail
Main circuit error (*3)	The inverter will trip if the gate array cannot confirm the on/off state of IGBT because of a malfunction due to noise or damage to the main circuit element.	E25	Main.Cir
Cooling-fan speed drop signal	If the rotation speed of the internal cooling fan decreases so that the cooling effect decreases, inverter output turns OFF for protection. (available only for SJ700 1850-4000)	E29	Fan. Slow
IGBT error	When an instantaneous over-current has occurred, the inverter trips and turns off its output to protect main circuit element.	E30	IGBT
Phase loss output protection (SJ700D only)	When the phase loss output protection has been enabled (b141=01), the inverter will trip to avoid damage if a phase loss output is detected.	E34	O.PH.Fail
Thermistor error	When the thermistor inside the motor detects temperature higher than the specified value, the inverter trips and turns off its output.	E35	TH
Braking error	The inverter turns off its output when it can not detect whether the braking is ON or OFF within waiting time set at b024 after it has released the brake. (When braking is enabled at b120)	E36	BRAKE
Emergency stop (*4)	If the EMR signal (on three terminals) is turned on when the slide switch (SW1) on the logic board is set to ON, the inverter hardware will shut off the inverter output and display the error code shown on the right.	E37	EMR
Low-speed overload protection	If overload occurs during the motor operation at a very low speed at 0.2 Hz or less, the electronic thermal protection circuit in the inverter will detect the overload and shut off the inverter output. (2nd electronic thermal control) (Note that a high frequency may be recorded as the error history data.)	E38	OL-LowSP
Modbus communication error	If timeout occurs because of line disconnection during the communication in Modbus-RTU mode, the inverter will display the error code shown on the right. (The inverter will trip according to the setting of "C076".)	E41	NET.ERR
Out of operation due to under-voltage	Due to insufficient voltage, the inverter has turned off its output and been trying to restart. If it fails to restart, it goes into the under-voltage error.	----	UV.WAIT
Easy sequence function Error	Error indications by protective functions with the easy sequence function used.	E43	PRG.CMD
		E44	PRG.NST
		E45	PRG.ERR1
Expansion card 1 connection error	An error has been detected in an expansion card or at its connecting terminals.	E60~E69	OP1-0 ~ OP1-9
Expansion card 2 connection error		E70~E79	OP2-0 ~ OP2-9

(*1): Reset operation is acceptable 10 seconds after the trip. (185kW and over :90 seconds) (*2): Check the parameters when EEPROM error occurs. (*3): The inverter will not accept reset commands input via the RS terminal or entered by the STOP/RESET key. Therefore, turn off the inverter power. (*4): The inverter will not accept the reset command entered from the digital operator. Therefore, reset the inverter by turning on the RS terminal.

TERMINALS

Control Circuit Terminals

● Terminal Description

		Symbol	Name	Explanation of Terminals	Ratings
Analog	Power Supply	L	Common Terminal for Analog Power Source	Common terminal for H, O, O2, OI, AM, and AMI. Do not ground.	-
		H	Power Source for Frequency Setting	Power supply for frequency command input	DC 10V, 20mA max.
	Frequency Setting	O	Frequency Command Terminal	Maximum frequency is attained at DC 10V in DC 0-10V range. Set the voltage at A014 to command maximum frequency below DC 10V.	Input impedance: 10kΩ, Allowable input voltage range: DC -0.3~+12V
		O2	Frequency Command Extra Terminal	O2 signal is added to the frequency command of O or OI in DC 0~±10V range. By changing configuration, frequency command can be input also at O2 terminal.	Input impedance: 10kΩ, Allowable input voltage range: DC 0~±12V
		OI	Frequency Command Terminal	Maximum frequency is attained at DC 20mA in DC 4-20mA range. When the intelligent terminal configured as AT is on, OI signal is enabled.	Input impedance: 100Ω, Allowable input voltage range: DC 0-24mA
	Monitor Output	AM	Analog Output Monitor (Voltage)	Selection of one function from: Output frequency, output current, torque, output voltage, input power, electronic thermal load ratio, and LAD frequency.	DC 0-10V, 2mA max.
		AMI	Analog Output Monitor (Current)		DC 4-20mA, 250Ω max.
Digital	Monitor Output	FM	Digital Monitor (Voltage)	[DC0-10V output (PWM output)] Selection of one function from: Output frequency, output current, torque, output voltage, input power, electronic thermal load ratio, and LAD frequency. [Digital pulse output (Pulse voltage DC 0/10V)] Outputs the value of output frequency as digital pulse (duty 50%)	Digital output frequency range: 0-3.6kHz, 1.2mA max.
		P24	Power Terminal for Interface	Internal power supply for input terminals. In the case of source type logic, common terminal for contact input terminals.	DC 24V, 100mA max.
	Power Supply	CM1	Common Terminal for Interface	Common terminal for P24, TH, and FM. In the case of sink type logic, common terminal for contact input terminals. Do not ground.	-
		Run Command	FW	Forward Command Input	The motor runs forward when FW terminal is ON, and stops when FW is OFF.
		Functions	1 2 3 4 5 6 7 8	Intelligent Input Terminals	Assign 8 functions to terminals. (Refer to the standard specifications for the functions.)
	Contact Input	Common Terminal	PLC	Common Terminal for Intelligent Input Terminals, Common Terminal for External Power Supply for PLCs, etc.	Select sink or source logic with the short-circuit bar on the control terminals. Sink logic: Short P24 to PLC / Source logic: Short CM1 to PLC. When applying external power source, remove the short-circuit bar and connect PLC terminal to the external device.
			11 12 13 14 15	Intelligent Output Terminals	Assign 5 functions to open collector outputs. When the alarm code is selected at C062, terminal 11-13 or 11-14 are reserved for error codes of inverter trip. (Refer to the standard specifications for the functions.)
			CM2	Common Terminal for Intelligent Output Terminals	Common terminal for intelligent output terminal 11-15.
	Open Collector Output	State	TH	Thermistor Input Terminals	The inverter trips when the external thermistor detects abnormal temperature. Common terminal is CM1. [Recommended thermistor characteristics] Allowable rated power: 100mW or over. Impedance in the case of abnormal temperature: 3kΩ Note: Thermal protection level can be set between 0 and 9999Ω.
			AL0 AL1 AL2	Alarm Output Terminals	In default setting, an alarm is activated when inverter output is turned off by a protective function.

● Terminal Arrangement

H	O2	AM	FM	TH	FW	8	CM1	5	3	1	14	13	11	AL1	
L	O	OI	AM1	P24	PLC	CM1	7	6	4	2	15	CM2	12	AL0	AL2

Screw diameter:M3

Terminal Width:6.4mm

Relay Output PCB (L300PTM)

L300PTM is available in case a relay output function is necessary.

Terminal Symbol	Specifications		
11A	Contacting Maximum Rate	AC250V	5A
11C			1A
12A			5A
12C	Contacting Minimum Rate	DC1V	1A

Note1: Please be sure to connect DC reactor attached to 1850HF, 2200HF, 3150HF and 4000HF.
(1850HF, 2200HF and 3150HF of US/JP Version: DC reactor is not attached.)

CONNECTING TO PLC

● Connection with Input Terminals

1. Using Internal Power Supply of The Inverter

(1) Sink type logic

Hitachi EH-150 series PLC
Output Module
EH-YT16

Inverter

(2) Source type logic

Hitachi EH-150 series PLC
Output Module
EH-YTP16

(Note: Place short-circuit bar
between PLC and CM1 instead of
P24 and PLC)

2. Using External Power Supply

(1) Sink type logic

Hitachi EH-150 series PLC
Output Module
EH-YT16

(Note: Remove short-circuit bar
between P24 and PLC)

(Note: Be sure to turn on the inverter after turning on the PLC and its external power source to prevent the parameters in the inverter from being modified.)

(2) Source type logic

Hitachi EH-150 series PLC
Output Module
EH-YTP16

(Note: Remove short-circuit
bar between P24 and PLC)

● Connection with Output Terminals

(1) Sink type logic

Inverter

Hitachi EH-150 series PLC
Input Module
EH-XD16

(2) Source type logic

Inverter

Hitachi EH-150 series PLC
Input Module
EH-XD16

Note 1: Field wiring connection must be made by a UL and c-UL listed closed-loop terminal connector sized for the wire gauge involved. Connector must be fixed using the crimping tool specified by the connector manufacture.

Note 2: Be sure to use large wire gauges for power wiring if the distance exceeds 20m (66ft).

Name	Function
Input side AC reactor	This is useful in suppressing harmonics induced on the power supply lines, or when the main power voltage imbalance exceeds 3% (and power source capacity is more than 500kVA), or to smooth out line fluctuations. It also improves the power factor.
EMI filter	Reduces the conducted noise on the power supply wiring generated by the inverter. Connect to the inverter input side.
Radio noise filter	Electrical noise interference may occur on nearby equipment such as a radio receiver. This magnetic choke filter helps reduce radiated noise (can also be used on output).
Radio noise filter (Capacitor filter)	This capacitor filter reduces radiated noise from the main power wires in the inverter input side.
DC link choke	Suppresses harmonics generated by the inverter.
Braking resistor	This is useful for increasing the inverter's control torque for high duty-cycle (on-off) applications, and improving the decelerating capability.
Braking unit	
Output side noise filter	Reduces radiated noise from wiring in the inverter output side.
Radio noise filter	Electrical noise interference may occur on nearby equipment such as a radio receiver. This magnetic choke filter helps reduce radiated noise (can also be used on input).
AC reactor	This reactor reduces the vibration in the motor caused by the inverter's switching waveforms, by smoothing the waveforms to approximate commercial power quality. It is also useful when wiring from the inverter to the motor is more than 10m in length, to reduce harmonics.
LCR filter	Sine wave shaping filter for the output side.

Note: An EMI filter is required for European EMC directive and C-Tick, but the others are not for this purpose.

WOP	☐	☐	☐		SJ700/SJ700D, SJ700B, SJ300, L300P

Cable

Cable <ICS-1,3>

Model	Cable Length
ICS-1	1m (3.3ft)
ICS-3	3m (9.8ft)

4X-KITmini (For installation with OPE-SR mini)

You can mount the keypad with the potentiometer for a NEMA1 rated installation. The kit also provides for removing the potentiometer knob to meet NEMA 4X requirements, as shown (part no. 4X-KITmini).

Operator

<OPE-SR mini>

<OPE-SBK (SR)>

<WOP>

Additional operation using optional operator WOP Main Features for WOP (SJ700D only)

- Large 5-line LCD screen
- Real time clock
- Copy function: Storing 4 sets of parameter settings
- Selectable display mode

Dimensions (Unit:mm (inch) Inches for reference only)

EXPANSION CARD

Digital Input Expansion Card SJ-DG

Output frequency, acceleration time, deceleration time, torque limit, and orientation position*1 can be set by a digital output device such as PLC, etc. (Binary or BCD)

Standard Specifications

Item		
Input	Data setting signal	
	Strobe signal	
Output	Sequence error signal (Data input error signal)	
Power supply	Power supply for interface	
Specification		
Input	NO contact input (sink/ source compatible)	D0,D1, ... between D15 and PLCB
		Between STRB and PLCB
Output	Open collector output (sink/ source compatible)	DC+27V 50mA max., between SEQ and CMB
Power supply	DC+24V 90mA max., between P24B and CM1	

*1 Orientation position setting is enabled when the feedback PCB (SJ-FB) is used together.

Connecting Diagram

Data Bit Configuration

Item	Mode1	Mode2
D15 D14 D13 D12 D11 D10 D9 D8 D7 D6 D5 D4 D3 D2 D1 D0	Data classification code Setting data Data can be set by either 16-bit binary or 4-digit BCD. Input data is divided into upper 8-bit and lower 8-bit.	Setting data Data can be set by either 16-bit binary or 4-digit BCD.

*Data input mode is selected by the dip switch on the expansion card.

Feedback Expansion Card SJ-FB

Detects motor speed with an encoder and receives the feedback speed fluctuation to realize high-precision operation. Positioning control and orientation with pulse-train input are also possible.

Application Examples

High-precision operation for the main motor of coil winding machine, wire drawing machine, truck, extruder, etc.

Connecting Diagram (Example)

General Specifications

Item		Specification
Speed control	Encoder feedback	Standard: 1024-pulse/r Maximum input pulse: 100k-pulse/s
	Speed control method	Proportional-Integral (PI) / Proportional (P) control
Position control	Positioning command	A-, B-phase, 90-degree phase difference input (By A-, B-, and Z-phase encoder), Maximum input pulse: 100k-pulse/s
	Electronic gear	Pulse ratio A/B (A, B: Setting range of 1-9999) $1/50 \leq A/B \leq 20$
Orientation	Stop position	4096 splitting per motor's single revolution (When using standard encoder)
	Speed	Orientation speed and rotational direction can be set
Protective functions		Encoder cable disconnection protection, Over-speed protection, Positioning error

DeviceNet™ EXPANSION CARD SJ-DN2

With fieldbus option module SJ-DN2, the inverter provides network compatibility with DeviceNet communication as a slave, allowing inverter operation and monitoring from a master device via fieldbus. Expensive hard-wiring can be eliminated for space saving and cost reduction, and installation/replacement within the system can be easily done.

Specifications

General data		Applicable DeviceNet specification		CIP Volume I –Release3. 4 CIP Volume III-Release1. 5 DeviceNet Adaptation
Physical conformance data	Vendor name	Hitachi Industrial Equipment Systems Co., Ltd.		Vendor ID=1112
	Device profile name	Slave AC Drive		Profile No=2
	Product revision	2.1		
	Network consumption current	50mA		
	Connector type	Open connector		
	Isolation of physical layer	Yes		
	Support LED	Module status / network status		
	MAC ID setting	set at DipSW		
	Default MAC ID	00		
	Transmission baud rate setting	set at DipSW		
Communication data	Support transmission baud rate	125k/250k/500k		
	Pre-defined master/slave connection set	Group 2 only server		
	UCMM Support	None		
	Support connection	Explicit message connection, Polled I/O connection		
		Explicit message fragmentation	Yes	

*SJ-DN2 cannot access new parameters if SJ700D-3

DIFFERENCE and COMPATIBILITY of SJ300 series and SJ700/SJ700D series

Items				SJ300 series		SJ700/SJ700D series	
Copying the parameter settings				You can copy the parameter settings from the SJ300 series into the SJ700 series. (You cannot copy the parameter settings from the SJ700 series to the SJ300 series because the SJ700 series has many new functions and additional parameters.)			
Parameter display mode.				No display mode selection. (full display)		Basic display mode/Data comparison function addition. Note:basic display mode. To display all parameters, specify "00" for "b037".	
Change function		Retry or trip parameter		Instantaneous power failure/under-voltage/ overvoltage/overcurrent:It sets up by b001.		Instantaneous power failure/under-voltage:It sets up by b001. overvoltage/overcurrent:It sets up by b008.	
		d001: Output frequency monitoring d007: Scaled output frequency monitoring		You can not change the output frequency setting by using the △ and/or ▽ key.		You can not change the output frequency setting by using the △ and/or ▽ key.	
		A016:External frequency filter time const.		Default:8		Default:31 Note 1	
		A038:Jog frequency setting		Setting range:0 to 999Hz		Setting range: 0.01 to 999Hz (0Hz setup is impossible)	
		A105:[OI]-[L] input start frequency enable		Default:01 (external start frequency)		Default:00 (0Hz)	
		b012, b212, b312: Electronic thermal function		Setting upper limit:120%		Setting upper limit:100%	
		C025:Terminal [15] function		Default:08 (instantaneous power failure)		Default:40 (cooling-fan speed drop)	
Terminal	Control Circuit	Removable		Removable		Removable (You can mount the SJ300 series into the SJ700/SJ700D series.)	
		Position		Other model:same position. 055L/H:5mm upper part from SJ300. 300L/H:97mm upper part from SJ300.			
	Main Circuit	Screw diameter	110L/H	M6 (Ground Screw)		M5 (Ground Screw)	
			300L	M8 (Ground Screw)		M6 (Ground Screw)	
			450L	M10		M8	
			370H	M6		M8	
		Position		055 to 110L/H:10mm upper part from SJ300. 300L:77mm upper part from SJ300. 300H:72mm upper part from SJ300. 150 to 185L/220H:29mm upper part from SJ300. 220L:18mm upper part from SJ300. 550L:25mm upper part from SJ300. Other model:same position.			
		Arrangement		055 to 110L/H:Two steps, 150 to 550L/H:One step		055 to 550L/H:One step	
Others		150 to 220L/H:RB there is not a terminal.		150 to 220L/H:RB there is a terminal.			
Easy-removable Dc bus Capacitor				All the models are possible.		15kW or more is possible.	
Dynamic Brake circuit				up to 11kW		up to 22kW	
Minimum value of resistor (Ω)		055L		17		16	
		075L		17		10	
		110L		17		10	
		055H		50		35	
		075H		50		35	
Dimensions		Installation		055L/H: SJ700/SJ700D is in next larger enclosure vs. SJ300. All other models are the same enclosure size.			
		External radiating fin		055L/H:Those with no compatibility.075 to 550L/H:Those with compatibility. Note 2			
Digital operator position				055L/H:5mm upper part from SJ300. 300L/H:97mm upper part from SJ300. Other model:same position.			
Option boards		SJ-DG		Those with compatibility.			
		SJ-FB					
		SJ-DN / SJ-DN2		Those with compatibility. Note:Since the SJ700 series has many new functions and additional parameters, some functions of the SJ-DN, SJ-LW, and SJ-PB/PBT (option boards conforming to the open network specifications) cannot be implemented on the SJ700 series. SJ-DN2, SJ-PB2/PBT2 has compatibility to SJ700-2. SJ-DN2, SJ-PB2/PBT2 cannot access new paramaters is SJ700D-3.			
		SJ-PB/PBT, SJ-PB2/PBT2					
		SJ-LW		available		not available	
Option position		Other model:same position. 055L/H:5mm upper part from SJ300. 300L/H:97mm upper part from SJ300.					

Note1: As analog response follows the V/F curve, selection of SLV may require this setting to be reduced.

Note2: 370, 450L/H and 550H:Metal fittings differ.

DIFFERENCE and COMPATIBILITY of L300P series and SJ700B series

Items				L300P series		SJ700B series	
Copying the parameter settings				You can copy the parameter settings from the L300P series into the SJ700B series. (You cannot copy the parameter settings from the SJ700B series to the L300P series because the SJ700B series has many new functions and additional parameters.)			
Parameter display mode.				No display mode selection. (full display)		Basic display mode/Data comparison function addition. Note:basic display mode [factory setting] To display all parameters, specify "00" for "b037".	
Change function		Retry or trip parameter		Instantaneous power failure/under-voltage/ overvoltage/overcurrent:It sets up by b001.		Instantaneous power failure/under-voltage:It sets up by b001. overvoltage/overcurrent:It sets up by b008.	
		d001: Output frequency monitoring d007: Scaled output frequency monitoring		You can not change the output frequency setting by using the up and or down key.		You can not change the output frequency setting by using the up and or down key.	
		A001: Frequency source setting		Default:00 (Keypad potentiometer on digital operator)		Default:02 (Digital operator)	
		A016: External frequency filter time const.		Default:8		Default:31 Note 1	
		A038:Jog frequency setting		Setting range:0 to 999Hz		Setting range:0.01 to 999Hz (0Hz setup is impossible)	
		A105: [OI]-[L] input start frequency enable		Default:01 (external start frequency)		Default:00 (0Hz)

		b013, b213, b313: Electronic thermal characteristic		Default:00 (reduced-torque characteristic)		Default:01 (constant-torque characteristic)	
		b092:Cooling fan control		Default:00 (always operating the fan)		Default:01 (operating the fan only during inverter operation [including 5 minutes after power-on and power-off])	
		b095:Dynamic braking control		Default:00 (disabling)		Default:01 (enabling [disabling while the motor is topped])	
Terminal	Control circuit	Removable		Removable		Removable (You can mount the L300P into the SJ700B .)	
		Intelligent input terminals		5 terminals		8 terminals	
		Intelligent output terminals		2 terminals (Relay)		5 terminals (Open collector)	
		Position		370L/H:97mm upper part from L300P. Other model:same position.			
	Main circuit	Screw diameter	150L/H	M6 (Ground Screw)		M5 (Ground Screw)	
			370L	M8 (Ground Screw)		M6 (Ground Screw)	
			550L	M10		M8	
			450H	M6		M8	
		Position		110,150LF/HF:10mm upper part from L300P. 185 to 220L/300H:29mm upper part from L300P. 300L:18mm upper part from L300P. 370L:77mm upper part from L300P. 370H:72mm upper part from L300P. 750L:25mm upper part from L300P. Other model:same position.			
		Others		185 to 300L/H:RB there is not a terminal.		185 to 300H:RB there is a terminal.	
Easy-removable Dc bus Capacitor				All the models are possible.		18.5kW or more is possible.	
Dynamic Brake circuit				Up to 15kW		Up to 30kW	
Minimum value of resistor (Ω)		110L		17		10	
		150L		17		10	
		110H		50		35	
		150H		50		35	
Dimensions		Installation		All models are the same enclosure size.			
		External radiating fin		Those with compatibility. Note 2			
Digital operator position				300L/H:97mm upper part from L300P. Other model:same position.			
Keypad potentiometer on digital operator				Yes.		No. (Option)	
Option boards		SJ-DG		Those with compatibility.			
		SJ-DN / SJ-DN2		Those with compatibility. Note:Since the SJ700B series has many new functions and additional parameters,some functions of the SJ-DN, and SJ-PB/PBT (option boards conforming to the open network specifications)cannot be implemented on the SJ700B series.			
		SJ-PB/PBT, SJ-PB2/PBT2					
		SJ-LW		available		not available	
		Option position		370L/H:97mm upper part from L300P. Other model:same position.			

Note1: Since a response falls the V/F characteristic curve selection SLV should make this setup small.

Note2: 450, 550L/H and 750H:Metal fittings differ.

FOR CORRECT OPERATION

Application to Motors

Application to general-purpose motors

Operating frequency	For operation at higher than 60Hz, it is required to examine the allowable torque of the motor, useful life of bearings, noise, vibration, etc. In this case, be sure to consult the motor manufacturer as the maximum allowable rpm differs depending on the motor capacity, etc.
Torque characteristics	The torque characteristics of driving a general-purpose motor with an inverter differ from those of driving it using commercial power (starting torque decreases in particular). Carefully check the load torque characteristic of a connected machine and the driving torque characteristic of the motor.
Motor loss and temperature increase	An inverter-driven general-purpose motor heats up quickly at lower speeds. Consequently, the continuous torque level (output) will decrease at lower motor speeds. Carefully check the torque characteristics vs speed range requirements.
Noise	When run by an inverter, a general-purpose motor audible slightly greater than with commercial power.
Vibration	When run by an inverter at variable speeds, the motor may generate vibration, especially because of (a) unbalance of the rotor including a connected machine, or (b) resonance caused by the natural vibration frequency of a mechanical system. Particularly, be careful of (b) when operating at variable speeds a machine previously fitted with a constant speed motor. Vibration can be minimized by (1) avoiding resonance points using the frequency jump function of the inverter, (2) using a tireshaped coupling, or (3) placing a rubber shock absorber beneath the motor base.
Power transmission mechanism	Under continued, low-speed operation, oil lubrication can deteriorate in a power transmission mechanism with an oil-type gear box (gear motor) or reducer. Check with the motor manufacturer for the permissible range of continuous speed. To operate at more than 60Hz, confirm the machine's ability to withstand the centrifugal force generated.

Application to special motors

Gear motor	The allowable rotation range of continuous drive varies depending on the lubrication method or motor manufacturer. (Particularly in case of oil lubrication, pay attention to the low frequency range.)
Brake-equipped motor	For use of a brake-equipped motor, be sure to connect the braking power supply from the primary side of the inverter.
Pole-change motor	There are different kinds of pole-change motors (constant output characteristic type, constant torque characteristic type, etc.), with different rated current values. In motor selection, check the maximum allowable current for each motor of a different pole count. At the time of pole changing, be sure to stop the motor. Also see: Application to the 400V-class motor.
Submersible motor	The rated current of a submersible motor is significantly larger than that of the general-purpose motor. In inverter selection, be sure to check the rated current of the motor.
Explosion-proof motor	Inverter drive is not suitable for a safety-enhanced explosion-proof type motor. The inverter should be used in combination with a pressure-proof explosion-proof type of motor. *Explosion-proof verification is not available for SJ700/SJ700D/SJ700B Series.
Synchronous (MS) motor High-speed (HFM) motor	In most cases, the synchronous (MS) motor and the high-speed (HFM) motor are designed and manufactured to meet the specifications suitable for a connected machine. As to proper inverter selection, consult the manufacturer.
Single-phase motor	A single-phase motor is not suitable for variable-speed operation by an inverter drive. Therefore, use a three-phase motor.

Application to the 400V-class motor

A system applying a voltage-type PWM inverter with IGBT may have surge voltage at the motor terminals resulting from the cable constants including the cable length and the cable laying method. Depending on the surge current magnification, the motor coil insulation may be degraded. In particular, when a 400V-class motor is used, a longer cable is used, and critical loss can occur, take any of the following countermeasures:

- (1) install the LCR filter between the inverter and the motor,
- (2) install the AC reactor between the inverter and the motor, or
- (3) enhance the insulation of the motor coil.

Notes on Use Drive

Run/Stop	Run or stop of the inverter must be done with the keys on the operator panel or through the control circuit terminal. Do not operate by installing a electromagnetic contactor (MC) in the main circuit.
Emergency motor stop	When the protective function is operating or the power supply stops, the motor enters the free run stop state. When an emergency stop is required or when the motor should be kept stopped, use of a mechanical brake should be considered.
High-frequency run	A max. 400Hz can be selected on the SJ700/SJ700D/SJ700B Series. However, a two-pole motor can attain up to approx. 24,000 rpm, which is extremely dangerous. Therefore, carefully make selection and settings by checking the mechanical strength of the motor and connected machines. Consult the motor manufacturer when it is necessary to drive a standard (general-purpose) motor above 60Hz. A full line of high-speed motors is available from Hitachi.

Repetitive operation on starting or plugging

About frequent repetition use (crane, elevator, press, washing machine), a power semiconductor (IGBT, a rectification diode, thyristor) in the inverter may come to remarkably have a short life by thermal fatigue.
The life can be prolonged by lower a load electric current. Lengthen acceleration / deceleration time. Lower carrier frequency. or increasing capacity of the inverter.

Operation use in highlands beyond 1,000m above sea level

Due to the air density decreasing, whenever standard inverters are used for altitudes above 1000m, the following conditions are additionally required for proper operation. In application for operation over 2500m, kindly contact your nearest sales office for assistance.

1. Reduction of inverter rated current
Current rating has to be reduced 1% for every 100m that exceeds from an altitude of 1000m.
For example, for inverters placed at an altitude of 2000m, the rated current has to be reduced 10% (Rated current x0.9) from its original amount.
{(2000m-1000m)/100m*1%=-10%}
2. Reduction of breakdown voltage
Whenever an inverter is used at altitudes beyond 1000m, the breakdown voltage decreases as follows:
1000m or less: 1.00 / 1500m: 0.92 / 2000m: 0.90 / 2500m: 0.85. As mentioned in the instruction manual, please avoid any pressure test.

Installation location and operating environment

Avoid installation in areas of high temperature, excessive humidity, or where moisture can easily collect, as well as areas that are dusty, subject to corrosive gasses, mist of liquid for grinding, or salt. Install the inverter away from direct sunlight in a well-ventilated room that is free of vibration. The inverter can be operated in the ambient temperature range from SJ700/SJ700D (CT): -10 to 50°C, SJ700D (VT): -10 to 40°C, SJ700B: -10 to 45°C. (Carrier frequency and output current must be reduced in the range of 40 to 50°C.)

Main power supply

Installation of an AC reactor on the input side	In the following examples involving a general-purpose inverter, a large peak current flows on the main power supply side, and is able to destroy the converter module. Where such situations are foreseen or the connected equipment must be highly reliable, install an AC reactor between the power supply and the inverter. Also, where influence of indirect lightning strike is possible, install a lightning conductor. (A) The unbalance factor of the power supply is 3% or higher. (Note) (B) The power supply capacity is at least 10 times greater than the inverter capacity (the power supply capacity is 500 kVA or more). (C) Abrupt power supply changes are expected. Examples: (1) Several inverters are interconnected with a short bus. (2) A thyristor converter and an inverter are interconnected with a short bus. (3) An installed phase advance capacitor opens and closes. In cases (A), (B) and (C), it is recommended to install an AC reactor on the main power supply side. Note: Example calculation with $V_{RS} = 205V$, $V_{ST} = 201V$, $V_{TR} = 200V$ V_{RS}: R-S line voltage, V_{ST}: S-T line voltage, V_{TR}: T-R line voltage $\text{Unbalance factor of voltage} = \frac{\text{Max. line voltage (min.)} - \text{Mean line voltage}}{\text{Mean line voltage}} \times 100$ $= \frac{V_{RS} - (V_{RS} + V_{ST} + V_{TR})/3}{(V_{RS} + V_{ST} + V_{TR})/3} \times 100 = \frac{205 - 202}{202} \times 100 = 1.5(\%)$
Using a private power generator	An inverter run by a private power generator may overheat the generator or suffer from a deformed output voltage waveform of the generator. Generally, the generator capacity should be five times that of the inverter (kVA) in a PWM control system, or six times greater in a PAM control system.

Notes on Peripheral Equipment Selection

Wiring connections	(1) Be sure to connect main power wires with R (L1), S (L2), and T (L3) terminals (input) and motor wires to U (T1), V (T2), and W (T3) terminals (output). (Incorrect connection will cause an immediate failure.) (2) Be sure to provide a grounding connection with the ground terminal (⊕).
Wiring between inverter and motor	Electromagnetic contactor When an electromagnetic contactor is installed between the inverter and the motor, do not perform on-off switching during running operation.
	Thermal relay When used with standard applicable output motors (standard three-phase squirrel-cage four-pole motors), the SJ700/SJ700D/SJ700B Series does not need a thermal relay for motor protection due to the internal electronic protective circuit. A thermal relay, however, should be used: • during continuous running outside a range of 30 to 60 Hz. • for motors exceeding the range of electronic thermal adjustment (rated current). • when several motors are driven by the same inverter; install a thermal relay for each motor. • The RC value of the thermal relay should be more than 1.1 times the rated current of the motor. If the wiring length is 10 m or more, the thermal relay tends to turn off readily. In this case, provide an AC reactor on the output side or use a current sensor.
Installing a circuit breaker	Install a circuit breaker on the main power input side to protect inverter wiring and ensure personal safety. Choose an inverter-compatible circuit breaker. The conventional type may malfunction due to harmonics from the inverter. For more information, consult the circuit breaker manufacturer.
Wiring distance	The wiring distance between the inverter and the remote operator panel should be 20 meters or less. Shielded cable should be used on the wiring. Beware of voltage drops on main circuit wires. (A large voltage drop reduces torque.)
Earth leakage relay	If the earth leakage relay (or earth leakage breaker) is used, it should have a sensitivity level of 15 mA or more (per inverter).
Phase advance capacitor	Do not use a capacitor for power factor improvement between the inverter and the motor because the high-frequency components of the inverter output may overheat or damage the capacitor.

High-frequency Noise and Leakage Current

- (1) High-frequency components are included in the input/output of the inverter main circuit, and they may cause interference in a transmitter, radio, or sensor if used near the inverter. The interference can be minimized by attaching noise filters (option) in the inverter circuitry.
- (2) The switching action of an inverter causes an increase in leakage current. Be sure to ground the inverter and the motor.

Lifetime of Primary Parts

Because a DC bus capacitor deteriorates as it undergoes internal chemical reaction, it should normally be replaced every five years. Be aware, however, that its life expectancy is considerably shorter when the inverter is subjected to such adverse factors as high temperatures or heavy loads exceeding the rated current of the inverter. The approximate lifetime of the capacitor is as shown in the figure at the right when it is used 12 hours daily (according to the "Instructions for Periodic Inspection of General-Purpose Inverter" (JEMA).) Also, such moving parts as a cooling fan should be replaced. Maintenance inspection and parts replacement must be performed by only specified trained personnel. Please plan to replace new inverter depends on the load, ambient condition in advance.

Precaution for Correct Usage

- Before use, be sure to read through the Instruction Manual to insure proper use of the inverter.
- Note that the inverter requires electrical wiring; a trained specialist should carry out the wiring.
- The inverter in this catalog is designed for general industrial applications. For special applications in fields such as aircraft, outer space, nuclear power, electrical power, transport vehicles, clinics, and underwater equipment, please consult with us in advance.
- For application in a facility where human life is involved or serious injury may occur, make sure to provide safety devices to avoid any accident.
- The inverter is intended for use with a three-phase AC motor. For use with a load other than this, please consult with us.

Information in this brochure is subject to change without notice.
